KWC PILLAR TAP

In restrooms and public spaces, turning water on and off should be hygienic and practical. The KWC pillar tap works for you with just one easy turn. Not only in its ergonomics and user-friendliness, but also in its use of resources, less is more – 5 liters/minute, to be specific. The KWC pillar tap is suitable for hot and cold water connections and, due to its sleek design, is an aesthetic fit in any setting.

At home, too, the KWC pillar tap is the ideal solution. It works well as a space-saving and resource-saving washbasin faucet or as a dispenser for drinking water.

Pillar tap

- Operating handle integrated into the spout
- Fixed spout
- Neoperl® Caché®
